

Summer is winding down and we're headed towards Fall, but it's still hot and dry. From last year's floods to this year's drought, you never know what you're going to get.

We've accomplished a lot in 2012, but we have some big work to get done this Fall. Here is a run-down:

Rulo, NE
1026' x 40' Steel Girder
This bridge has really taken off after the slow start in '10-'11. Chad and Nels got it back on track. Now, Chad is finishing Pier 3 and has set some steel girders.

Sioux City, IA
Brick Faced Pier Columns
Kelly, Darren, Scott C, Scott D. and Bob are making a big push to get traffic on 2 bridges over I-29.

Ben and Doug finished raising 3 bridges in Monona County (south of Sioux City)

Chamberlain, SD
Josh's crew is shown here finishing stage 1 of a large overlay of I-90 over the Missouri River in beautiful South Dakota. He and Ryan are now on stage 2.

Corps Riverwalk
Chuck and Mike V. finished building flood walls in downtown Des Moines. The kiosk building and landscaping is almost done.

Dave, Brad, Tim and Jack are working on overlays around Iowa.

Fremont, NE
427m x 24m Prestressed Beam Bridge

The first half of this bridge was completed earlier this year. Starting Aug. 1st, Jeff, Jake, Ben and Doug have until Feb. 1st to complete the substructure of the 2nd half.

Ottumwa, IA
770' x 77' Steel Girder Bridge

Lamy joined Nels and they are widening 5 piers before we replace the superstructures next year.
